## Skills

### Backend & Systems

- Java (Enterprise, Embedded)
- Grails (Web & API)
- RESTful API Design
- API-Driven services
- SQL
- OAuth2 / JWT
- Node

### Frontend

- React
- Flutter

### Cloud & DevOps

- Docker
- CI/CD Pipelines
- Azure
- Google

### Tools

- Git / GitHub
- Linux-based environments

## Education

B.S.

Software Engineering

**Western Governors University**

May 2018 - November 2020

Software Engineer with 4+ years of experience building Java-based backend and embedded systems for enterprise environments. Specialized in APIs, integrations, and internal tools that support large-scale device and cloud platforms. Comfortable owning services end-to-end from design through deployment.

## WORK EXPERIENCE

---

### Technical Integration Specialist

**Xerox - Lexmark, Intl.**

July 2022 - current Lexington, KY

- Designed and maintained Java/Grails backend services for enterprise multifunction printers, enabling secure integration with 5+ cloud platforms.
- Built embedded software components supporting large-scale device fleets across diverse enterprise environments.
- Developed internal tools and automation that improved developer workflows, reduced troubleshooting time, and accelerated integration testing.
- Led deployments of print management solutions across dozens of customer fleets, reducing manual configuration time by ~30%.
- Collaborated with cross-functional teams to upgrade and support global print management systems with high availability requirements.
- Recognized for innovative contributions during internal hackathons focused on cloud-connected product capabilities.

### Software Delivery

**10th Planet Screen Printing**

- Designed and built a mobile business application to centralize order management, customer data, and operational workflows.

## PROJECTS

---

### Food Truck Management Application

- Designed backend integrations supporting menus, scheduling, loyalty programs, and payments
- Implemented Flutter UI as a client for backend services
- Integrated third-party APIs for payments and location services

### Sourdough Bread Ordering Web Application

- Built React frontend backed by Firebase authentication and realtime data services
- Designed application architecture for extensibility and future backend expansion
